

The "Green Machine" Helps Your Bedding Stay Clean!

The "Green Machine" is a steel constructed, electrically operated sift-ing machine which automatically removes the manure from the bedding, both cleaning and mixing the bedding in one smooth operation. Shovel both the manure and bedding onto the vibrating screen. The bedding is instantly mixed and cleaned and drops back onto the stall floor, clean and ready for spreading. The manure rolls off the end into your bucket. Your stalls will become cleaner with up to 70% less cleaning time and you should save at least 50% on bedding cost. No more arm or back pain. No odor and fewer flies.

The "Green Machine" works with all bedding materials as long as they are small enough to pass through the 1/2 inch x 1 inch diamond grid screen. Powder coating this all steel constructed machine makes the surface almost indestructible. Powered by a 1/2 hp commercial electric motor with 20 inch, high quality spoked wheels and pneumatic tires gives you the satisfaction of owning the best.
